

User Flow of Campus Opportunity Discovery System

Aim

The aim of this project is to design and document the user flow of a Campus Opportunity Discovery System. The purpose of this system is to illustrate the sequence of steps that a user follows while interacting with the application, starting from registration or login to viewing opportunities, searching events, and registering for them. The flow helps in understanding how users navigate through the system and ensures that the interface is simple, efficient, and user-friendly.

Objective

The main objectives of designing this user flow are:

- To design a clear and structured user flow for a campus opportunity discovery system.
- To understand the sequence of interactions between the user and the system.
- To represent the working process of the system using a flowchart diagram.
- To ensure smooth navigation for users from registration to exploring opportunities.
- To allow organizers or administrators to create and manage events efficiently.

System Flow Diagram

Campus Opportunity Discovery System Flowchart

Description of the System Flow

The Campus Opportunity Discovery System flow represents the complete process that users follow to discover and participate in opportunities such as campus events, workshops, or competitions.

The process begins with the **Start** stage where the user opens the website. Once the website is opened, the system checks whether the user is already registered in the system.

If the user is not registered, the system directs the user to the **User Registration** process. In this step, the user enters personal details such as name, email, and password to create an account. After completing the registration, the account is successfully created and the user proceeds to login.

If the user is already registered, they can directly proceed to the **Login** page. Here, the user enters their login credentials. The system validates the entered credentials. If the credentials are incorrect, an error message is displayed and the user is asked to try again.

If the credentials are valid, the user is redirected to the **User Dashboard**. From the dashboard, the system identifies the role of the user, which can be either a **Student** or an **Organizer/Admin**.

If the user is a **Student**, they can view the available opportunities listed in the system. Students can search or filter opportunities based on their interests. After selecting an opportunity, the user can view detailed information about the event. The student may also bookmark the opportunity or register for the event. Once registered, the user may receive notifications related to the event. After completing their activity, the user can log out of the system.

If the user is an **Organizer or Admin**, they are given permission to manage opportunities in the system. Organizers can create new opportunities by adding event details. They can post opportunities, update them, or delete them if necessary. Organizers can also view participation data of users who registered for the events. After completing their tasks, the organizer logs out and the process ends.

This structured flow ensures smooth interaction between users and the system while providing clear functionality for both students and event organizers.

Advantages of the System

The designed user flow provides several advantages for both users and administrators. The structured process helps users easily discover and participate in campus opportunities without confusion. Students can quickly search and explore events based on their interests. Organizers can efficiently manage events and monitor participation data. The flow diagram also helps developers understand the complete workflow of the system, making it easier to design and implement the application effectively.

Wireframe of the Campus Opportunity Discovery System

The wireframe represents the visual layout and structural design of the Campus Opportunity Discovery System interface. It helps illustrate how different UI components such as navigation bars, search features, opportunity cards, and user actions are organized within the application.

The wireframe for this system includes the following primary screens:

- Login Screen
- Dashboard / Home Screen
- Opportunities Listing Screen
- Opportunity Details Screen
- Bookmarks Screen

Each screen plays a specific role in guiding the user through the process of discovering and applying for opportunities.

1. Login Screen Wireframe

The Login Screen provides secure access to the system. Users enter their email and password to sign in to their account.

Features included in this wireframe:

- Email input field
- Password input field
- Password visibility toggle
- Forgot password option
- Sign in button
- Alternative login options (Google / Apple)
- Link to create a new account

This screen ensures authentication before allowing access to the platform.

A mobile app login screen wireframe. At the top, it says "Welcome Back" in bold, followed by "Please sign in to your account". Below this are two input fields: "Email" with the placeholder "name@example.com" and "Password" with the placeholder "Enter your password" and an eye icon for toggling visibility. A link "Forgot password?" is positioned below the password field. A large orange "Sign In →" button is centered below the inputs. Underneath the button is the text "or continue with" flanked by two buttons: "Google" and "iOS Apple". At the bottom, it says "Don't have an account? Create Account". A blue line points to the "Sign In" button.

2. Dashboard Screen Wireframe

The Dashboard serves as the main interface of the application where users can explore opportunities recommended for them.

Features included in this wireframe:

- Navigation menu icon
- User profile icon
- Search bar for opportunities
- Latest opportunities section
- Opportunity cards displaying title, category, and deadline
- Apply Now and View Details buttons
- Bottom navigation bar (Home, Saved, Profile)

This screen allows users to quickly browse and interact with available opportunities.

3. Opportunities Listing Screen Wireframe

The Opportunities screen displays a list of available opportunities that users can explore.

Features included in this wireframe:

- Search bar to find opportunities
- Filter options such as Internship, Volunteer, and Full-time
- Opportunity cards showing organization name and deadlines
- Bookmark option for saving opportunities
- Bottom navigation bar for quick navigation

This screen helps users easily discover opportunities relevant to their interests.

4. Opportunity Details Screen Wireframe

The Opportunity Details screen provides complete information about a selected opportunity.

Features included in this wireframe:

- Opportunity title and image
- Category tags such as Design, Fellowship, Remote
- Deadline and duration information
- Detailed description of the opportunity
- Eligibility criteria
- Bookmark option
- Apply Now button

This screen enables users to understand the opportunity in detail before applying.

5. Bookmarks Screen Wireframe

The Bookmarks screen allows users to view and manage opportunities they have saved for later.

Features included in this wireframe:

- List of bookmarked opportunities
- Opportunity titles and deadlines
- Delete option to remove saved opportunities
- Navigation tabs for different bookmark categories
- Bottom navigation bar

This screen helps users easily track opportunities they are interested in.

Result

The wireframe for the Campus Opportunity Discovery System was successfully designed and documented. The wireframes clearly represent the layout, navigation structure, and functional components of the system.

These wireframes help visualize how users interact with the application, from logging into the system to browsing opportunities, viewing detailed information, bookmarking opportunities, and applying for them. The structured layout ensures a smooth and user-friendly experience while also assisting developers in understanding the interface design before implementation.

DEADLINE
Nov 15, 2024

DURATION
6 Months

About the Program

This fellowship is designed for emerging designers looking to bridge the gap between academic learning and professional practice. Participants will work on real-world projects with industry mentors.

Selected fellows will receive hands-on training in user research, wireframing, and prototyping while contributing to impactful digital products that reach millions of users globally.

Eligibility

- Currently enrolled in or a recent graduate of a design-related program.
- Strong portfolio demonstrating problem-solving skills.
